Abstract

PURPOSE: To fixedly bond a seat skin to a cushion pad by the use of a hot melt bonding agent without heating or melting.

CONSTITUTION:A hot melt bonding agent provided with a metal material made exothermic by induction heating with a high frequency electromagnetic field 3 is located and exposed attachably to the surface side of a cushion pad when it is foam molded. After a seat skin 5 is placed on the cushion pad 6, the metal material made exothermic by electromagnetic induction melts the hot melt bonding agent to attachably press the seat skin 5 against the cushion pad 6.
